

1. INCIDENT OVERVIEW

Analysis Reference ID: QA-ANALYSIS-001

Incident Timestamp: 2026-09-24T08:30:00Z

Sender / Reporting User: QA analyst (qa@example.test)

Incident Summary: A test fixture containing a direct verification-code request and account threat.

2. ORGANIZATION IMPERSONATION

Detected Entity: Not verified

Organization Category: Not available

Claimed Caller Role: Unverified caller

Impersonation Assessment: Not determined

Claim Evidence Quote: Not available

3. RISK ASSESSMENT

Overall Risk Score: 72.4 / 100

Threat Classification: Credential solicitation

Model Confidence: 83%

Evidence Coverage: 75%

Identified Threat Indicators:

- Direct OTP solicitation detected

4. VOICE AUTHENTICITY (ACOUSTIC FORENSICS)

Detection Engine: QA acoustic model

Authenticity Verdict: SUSPICIOUS

Synthetic Probability: 62%

Engine Telemetry Reference: qa-provider-001

5. SPEAKER IDENTITY & BIOMETRICS

Comparison Target: None

Acoustic Similarity: N/A

Biometric Decision: NO_COMPARISON_REQUESTED

6. CONVERSATION INTELLIGENCE & TACTICS

Caller Objective: Obtain a verification code

Attack Category: Credential solicitation

Social Engineering Levers: Account threat

OTP Requested: YES (CRITICAL)

Credentials Requested: No

Financial Transfer Demanded: No

7. TRANSCRIPT EVIDENCE (REDACTED)

"Please share the [REDACTED CODE] now or your account will be blocked."

Source-timestamped Evidence Timeline:

- 9.6s - OTP request - Please share the code now

8. USER EXPOSURE ASSESSMENT

Credentials Disclosed in Call: No indication

Funds Transferred During Call: No indication

Current Risk Level After Call: NOT_DETERMINED

9. RECOMMENDED DEFENSIVE ACTIONS

- Do not share verification codes.
- Contact the organization through a verified channel.

10. CRYPTOGRAPHIC EVIDENCE INTEGRITY

Audio SHA-256 Hash: 7d23af091b8f526a144b685ed23e75a43d55d58fc193e458f9f5d3cae50d6a77

Canonical Report SHA-256 Hash: qa-report-hash

HMAC Signature: qa-signature

Verification Specification: QA HMAC-SHA256

11. VERIFICATION & TRANSPARENCY NOTICE
