VOICE FRAUD INCIDENT ANALYSIS REPORT

Analytical aid - not a government certificate, legal finding, or proof of wrongdoing

ASSESSMENT: HIGH

Score: 72.4 / 100

Confidence: 83%

1. INCIDENT METADATA - VERIFIED FIELDS ONLY

Analysis ID:	QA-REPORT-001
Call / incident ID:	Not available
Recording filename:	sample-call.webm
Incident timestamp:	24/9/2026, 2:00:00 pm
Report generated:	24/9/2026, 2:30:00 pm
Duration:	38.3 seconds
Audio SHA-256:	7d23af091b8f526a144b685ed23e75a43d55d58fc193e458f9f5d3cae50d6a77

2. AI-GENERATED RISK ASSESSMENT

The values in this section are model or rules-engine assessments. They are not independently verified facts.

Overall risk:	72.4 / 100 (HIGH)
Model confidence:	83%
Evidence coverage:	75%
Synthetic-speech probability:	62% (QA acoustic model)
Speaker comparison:	Not available
- Direct OTP solicitation detected - Account suspension threat detected	

3. SYSTEM-DETECTED INDICATORS AND SUPPORTING EVIDENCE

These are detector outputs. Quoted text is taken from available evidence; an indicator does not by itself establish fraud.

- OTP request [CRITICAL] - Evidence: share the [REDACTED CODE] now
- Account suspension threat [HIGH] - Evidence: account will be blocked

4. EVIDENCE TIMELINE

- 9.6s - OTP request - Please share the code now (Timestamped transcript segment)
- 20.3s - Account suspension threat - Your account will be blocked (Timestamped transcript segment)

5. REDACTED TRANSCRIPT EXCERPT

The caller asked for a six digit code and claimed the account would be blocked. No caller identity or financial loss was verified.

6. RECOMMENDED FOLLOW-UP ACTIONS

The following actions are precautionary recommendations, not verified observations.

- Do not disclose credentials, verification codes, card details, or banking PINs.
- End the interaction and contact the claimed organization through a separately verified channel.
- Preserve the original recording, transcript, timestamps, and this report for review.
- If money or credentials may have been exposed, contact the relevant financial institution promptly.

7. LIMITATIONS AND INTERPRETATION

- AI and deterministic detectors can produce false positives and false negatives. A high score requires human review of the cited evidence.
- A low score or unavailable evidence does not authenticate a caller or guarantee safety.
- Synthetic-speech probability, speaker similarity, and conversational risk are different measurements and must not be treated as interchangeable.
- Only source-provided timestamps are shown. Missing metadata, identities, monetary loss, and legal conclusions are not inferred.
- Preserve the original audio separately; this PDF is a structured analytical summary.

8. EVIDENCE INTEGRITY

Audio hash: 7d23af091b8f526a144b685ed23e75a43d55d58fc193e458f9f5d3cae50d6a77
Provider request reference: qa-provider-001
Analysis request ID: qa-analysis-request-001

Integrity fields identify available records but do not certify a caller claim or the correctness of an AI assessment.
